Power of engines

13 m/14 m/17 m
3 to 4.5 t
99 hp to 118 hp

SECURE BASE

Case TX telescopic handlers offer impressive stability through a combination of a long wheelbase, low boom pivot point and optimised counterweight. **Total stability. Maximum lift capacity.**

POWER TO WORK

The TX telehandler range is powered by high output Case engines, offering 99 hp on TX130-33 model and now 118 hp from a new climate friendly Tier III low emissions engine in the TX130-40 and above. This engine combines low fuel consumption with a strong 516 Nm of torque, enough to pull the machine through the toughest of site conditions. All engines are mounted longitudinally on the side of the machine, for a maximum transfer of power and ease of service.

High output. Low emissions and consumption.

REACHING HIGH

Robust boom construction with powerful hydraulic cylinders, or chain extension on some 13 m models, offers excellent range of working heights up to 17 m. Hydraulic frame levelling, along with audible and visual safe load indication ensures secure placing of loads at any height or reach.

Design integrity. Maximum capacity.

ALL ROUND EXCELLENCE

With a curved front screen and maximum glazed area in side and rear windows, the TX cab offers superb visibility all round the machine. A low engine canopy to the right of the machine and a low mounted control panel to the front, ensure that the operator always has a clean line of sight for efficiency and safety. Reduced height mast pivot points ensure that the operator has good visibility even to the rear of the telescopic handler. Both the cab door and the left hand window can be opened independently, locking back against the cab structure for security.

Unparalleled visibility. Safe operation.

ALL TERRAIN CAPABILITY

Powershift transmissions handle high power delivery without heat build-up. Smooth gear shifting and three steering modes ensure that the operator can work in the toughest site conditions. Four wheel steering greatly reduces turning circle, while crab steer offers the perfect solution when working against obstacles.

Outstanding manoeuvrability. Reliable components.

TOTAL CONTROL

With standard pilot controls for all hydraulic functions the Case TX telehandler is an easy machine to drive. Load sensing, flow sharing hydraulics, in combination with a smooth Powershift transmission, ensure independent movement of all hydraulic functions, with precision and accuracy. Low effort control levers reduce operator fatigue, ensuring high productivity and maximum safety throughout the working day.

Smooth operation. Precision control.

MAINTENANCE ACCESS

Side-mounted engine with full length lift-up canopy ensures access for ground level servicing and regular maintenance. All filters and fill points easily accessible, for minimum downtime and maximum productivity. Main hydraulic valve mounted at the rear of the machine, can be reached through separate panel without having to move other components.

Design integrity. Minimum downtime.

ATTACHMENT CARRIER

Case dealers offer a wide range of options, tyres and attachments to perfectly customise the machine to your individual requirements. Mechanical or hydraulic carriers can be specified along with optional sideshift capability. Customers can choose a carrier compatible with Case attachments or one designed to fit their existing buckets and work tools. Attachments include pallet forks, 4-in-1 buckets, crane booms, road sweepers, cement mixers and a range of personnel platforms, with or without radio control.

Multiple use. Versatility built-in.

TWO TELESCOPIC DESIGNS

The TX range uses robust telescopic booms with inherent rigidity and strength to allow many hours of safe lifting. The TX130-33 has a chain driven extension for the second boom section, while all larger machines use an internally mounted hydraulic twin cylinder to extend the boom. All models are equipped with safety valves on the lift, tilt and stabiliser cylinders, to prevent the boom dropping in the case of hose failure.

Visual and audible warning devices signaling overload are incorporated in the upper right corner of all cabs. On TX130-40 and above models, a strict safety device automatically prevents any hazardous extension of the mast. This feature makes the TX130-40 and above models suitable for the use of man platforms. Case provides a complete range of man baskets, fixed, orientable or even remotely radio controlled for tasks requiring to carry personnel.

HIGH LOAD CAPACITIES

There is a Case TX telehandler for every task on the construction site. Customers can choose from 13 m, 14 m and 17 m working heights, with lifting capacities from 3.3 to 4.5 tons. The smallest machines can be used without the need for stabilisers and there are several models with narrow stabilisers that open within the machine width. Wide stabiliser legs (standard on 17 meter model) are provided for maximum stability while lifting on the heavier models, giving Case some of the highest lifting capacities in the market.

HIGH MANOEUVRABILITY DRIVELINE

TX machines are incredibly agile, moving rapidly about the site thanks to a four-speed Powershift transmission and the easy to use three mode steering system. This combination of proven components ensures that there is no costly heat build-up in the transmission, even when travelling at high speeds on the road, where permitted.

The use of flow sharing hydraulics, along with the Powershift transmission, ensures precision work can be accomplished with ease. The single servo lever that controls all hydraulic functions also has a transmission cut-out button, giving the operator total control of the machine without having to move a hand away from the servo or the steering wheel. This ensures maximum safe use on site and reduced operator effort, cutting operator fatigue and boosting productivity.

OPERATOR'S CAB

From its initial conception the Case telehandler cab has led the field in terms of ergonomics, visibility and safety. Its curved top with wrap around glazing offers unparalleled visibility of the boom and the load. A glazed door, with opening window, provides easy access to the cab and the deep glass, low engine canopy and low boom pivot point ensure an excellent view all around the machine. This is a major contributing factor to increased site safety and prevents damage to the machine when manoeuvring in confined spaces. All instruments are placed in a low level console to further boost visibility to the front of the machine. Simple, single lever servo controls are easy to use and the operator has plenty of space in the ROPS/FOPS cab to remain comfortable throughout the day.

ENGINE

The TX telescopic handler range is powered by a 4.5 litre Case turbo engine. All machines are equipped with a low emission Tier III climate friendly engine, that with turbocharging and aftercooling offers from 99 hp to a healthy 118 hp and a powerful 516 Nm of torque.

Mounted on the side of the machine, the engine is easily accessible for all regular service and maintenance work, with filters and fill points all reached from ground level. Long service intervals and compatibility with the Case electronic service tool (EST) ensure minimum downtime, increasing profitability and keeping your machines at work.

FLOW SHARING HYDRAULICS

A fully load sensing hydraulic system, with flow sharing technology, allows independent use of all hydraulic functions. All major operations, such as lift and lower and forward reach, are controlled from a single servo lever, allowing the operator to keep one hand on the steering wheel when manoeuvring to a loading position. The flow sharing system ensures smooth lifting and reach and provides power when working with varied attachments. The main hydraulic valve is mounted at the rear of the machine and is fully accessible through a separate cover, without having to remove additional components, cutting diagnostic and maintenance time and boosting profitability.

POWERSHIFT 3 STEERING MODES

A proven Powershift transmission delivers four forward and three reverse speeds, with no heat build up despite high manoeuvring speeds. Working in combination with the flow sharing hydraulic system, the Powershift transmission offers precise control with high tractability, ideal for use on hard standing or in tough construction project conditions.

Three mode steering, offering two wheel, four wheel and crab modes, ensures even the largest model in the range has compact and agile manoeuvring dimensions. Four wheel steering provides the smallest possible turning radius, while crab steer offers the perfect solution when working alongside structures or for backfilling when working with a bucket.

TX130-33/TX130-40 TX130-45/TX140-45 TX170-45

STANDARD EQUIPMENT & OPTIONS

STANDARD EQUIPMENT

Design concept

- 99hp and 188hp (both turbo aftercooled 4,5 liter 4 cylinder Tier 3)
- 4 Wheel Drive
- Powershift transmission
- 3 steering modes (2WD 4WD Crab)
- Flow sharing / Load sensing hydraulics
- Narrow (TX130) or wide (TX140/170) stabilisers
- Front axle balance control
- Independent stabilisers controls
- 2 rear lateral counterweights
- Load movement indicator and safety device
- Single battery
- Front and rear fenders
- Raincup for engine filter
- Road light support
- Road lights
- Left and right mirrors
- Mechanical parking brake
- Plate holder

Boom

- Chain (TX130 - 33) or Cylinder (others) boom extension
- 3 piece (TX130 / 140) or 4 piece (TX170) boom
- Self levelling
- Single lever hydraulic pilot control

Cab comfort

- Cloth seat with seat belt
- Rounded windshield with wiper
- Split door opening at 180°
- Sun visor
- Heating and efficient defrosting
- Single lever joystick (extension, boom, bucket, transmission cutout, hydraulic circuit)

Safety

- ROPS/FOPS cab
- Load movement indicator
- Hazardous boom extension warning (TX130-33) or stopping (other TX's) device
- Sun roof protection grill
- Seat belt
- Safety decals

- Noise insulation meeting european standards
- Safety valves on lift - tilting - boom - stabilizers
- Backup alarm

OPTIONS

Choice of tyres (construction or agricultural pattern)

Choice of tyre sizes

Boom

- Hydraulic connection for attachment
- Boom working lights
- Electric circuit side boom

Tools

- Choice of Case/CNH or competition carriers (mechanical or Hydraulic)
- Choice of fixed or sideshift carriage
- Choice of buckets (Std, 4x1) with blade or teeth
- Choice of forks (fixed or floating)
- Fork extension
- Hooks
- Truss boom
- Extendible crane jib
- Concrete mixer
- Basket material handling
- Other
- Manplatform with or without Remote control

Cab

- Air conditioning
- Cloth deluxe suspension seat with seat belt
- Rear wiper
- Roof wiper
- Steering wheel knob
- External screen guard
- 2 front working lights
- 1 rear working light
- Titable steering wheel
- Other
- Twin batteries
- Cold start engine
- Limited slip differential on front axle
- Rotating beacon
- Trailer hook

Standard and optional equipment shown can vary by country.
